

COMMERCIAL REQUESTS RECORD FORMAT FOR EMAIL VOTER LISTS

Each email voter list constitutes of a tab delimited text file and an optional vote history file. The tab delimited format can be opened in Microsoft Excel as long as the record count does not exceed 1,048,576. Older versions of Excel are limited to 65,000 records. Microsoft Access may be used as an alternative to open the file.

The main file is the voter record for the selection criteria requested, and the vote history file contains the voting activity by election date of the voters in the main file. The number of vote history records per voter will not exceed twenty, but may be less based upon the registrant's participation. New voters and voters who have not participated in a prior election will have no Vote History records.

Within the Voter History table, the first two fields uniquely identify the voter and will be the join fields for the Main File. The last two have the "historical rank" of the election date (0 for most recent for that voter, 1 for second most recent, etc.) and the election date.

Jurisdiction_Parish and Registration_Number create a unique identifier for joining the main record to the vote history record.

WalklistOrder (included subject to request)

* Special Districts (set up primarily as taxing districts) are not included unless specifically requested

* If voting history is included in the same file, there will be additional columns for the last 20 elections and parishes in which the voter has voted. The format is below, where 0 is the most recent voting record for the voter, 1 is the second most recent voting record, continuing to 19:

VotingHistoryElection[0-19]
VotingHistoryParish[0-19]

* If voting history is included in a separate file, you will receive an additional file in the following format:
